FormCal GFRS[®] Glass Fiber Reinforced Stone

- FormCal GFRS[®] Glass Fiber Reinforced Stone is a new generation of stone finishing product incorporating innovative manufacturing techniques that go beyond the conventional Glass Fiber Reinforced Cement (GFRC) Technology.
- The surface of FormCal GFRS[®] products come in a wide range of stone finishes which is created from a proprietary blend of high quality Aalborg White[®] cement, silica sand, fine aggregates, mineral fillers, glass fiber, polymer, UV resistant pigment and other additives.

Why FormCal GFRS[®] ?

Non-Chemical Binder System

- Using cement as binder (VOC Free) instead of chemical binders.

No Joints

- A three (3)-dimensional stone finishing product can be made in a single unit without joints (which could not be readily achieved using ordinary stone and marble materials).

Light Weight

- Two to three times lighter in weight compared with pre-cast product of similar size.

Flexibility

- Custom made to suit individual life styles and designs.

Durability

- The use of glass fibers for reinforcement provides the strength and flexibility which make the product strong, durable and can be easily handled.

Resistance to Stains

- Surface is well protected with high performance coating against most common stains such as coffee, soft drinks, soy sauce, motor oils, etc.

Beauty

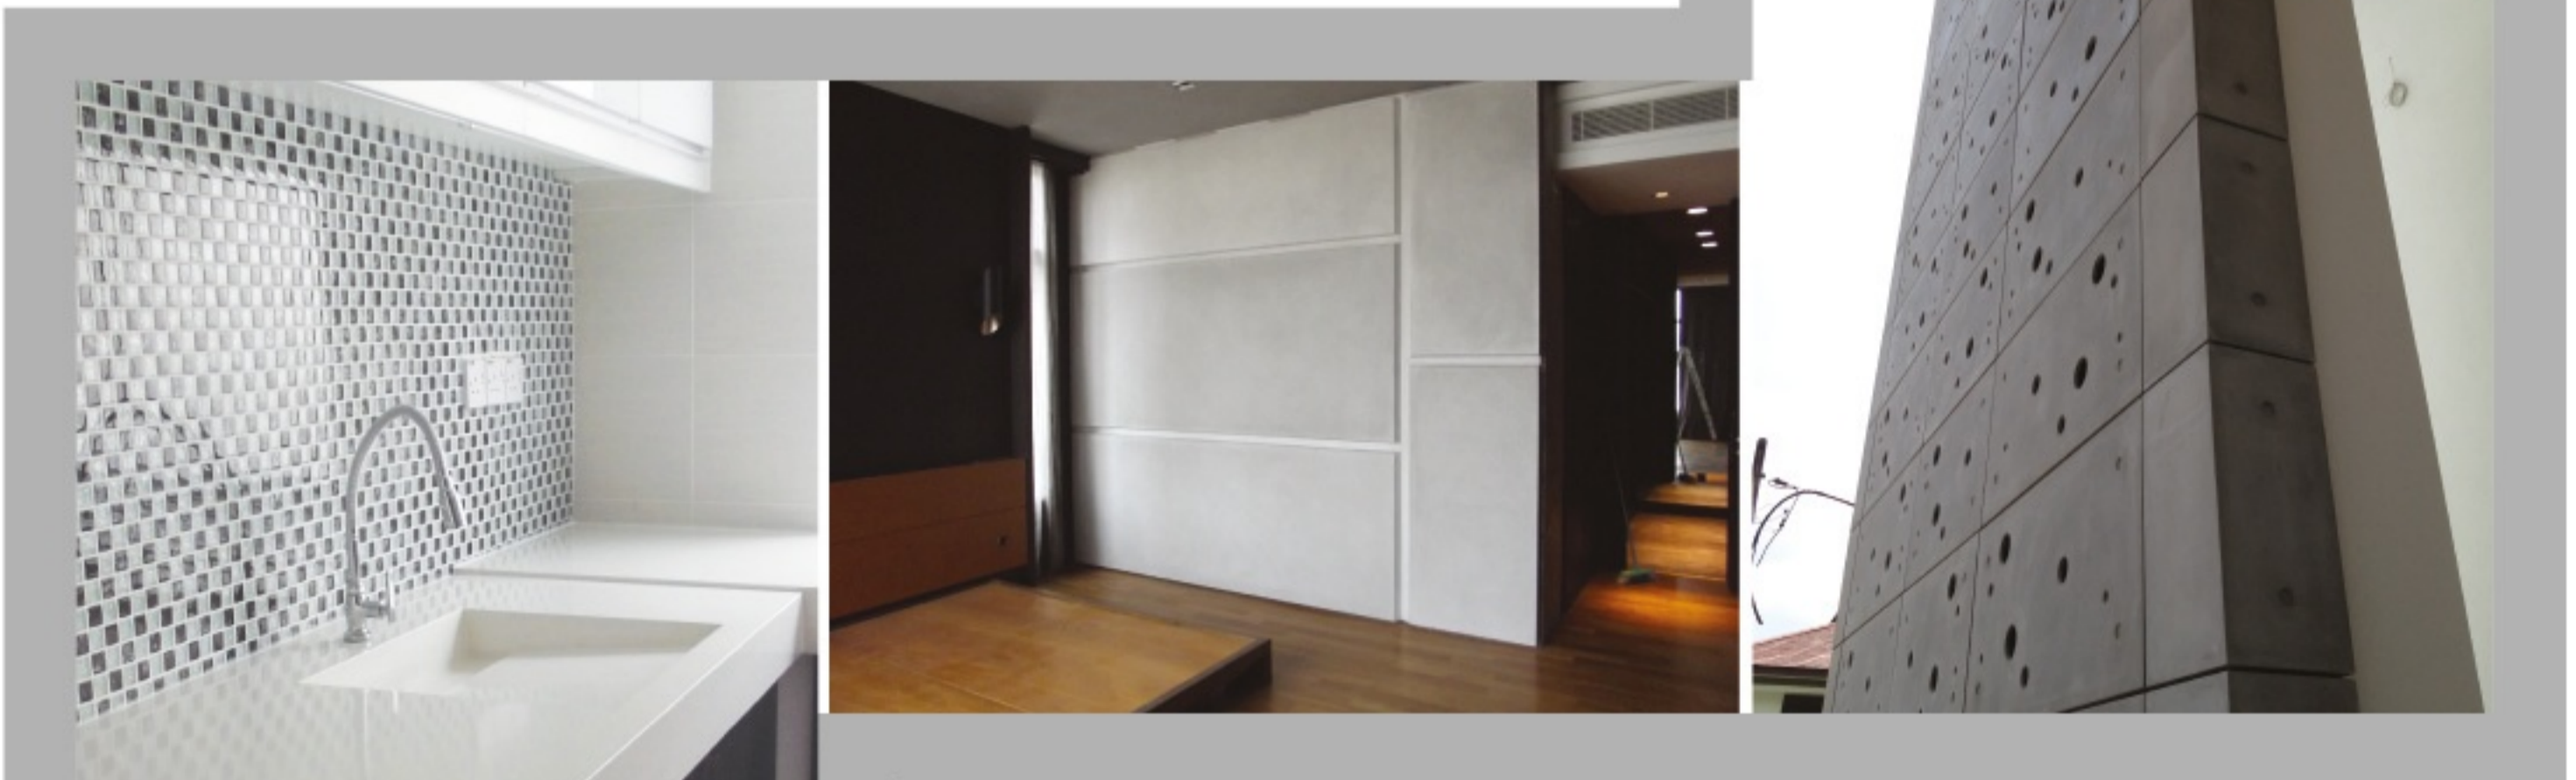

- FormCal GFRS[®] offers a new generation of elegant stone look unique to its own.
